## Application examples

**Water treatment installation**

Automatic multi-step capacitor bank with detuned filter, model **CMSR**, 2250 kvar at 6,6 kV, 50 Hz, 5x650 kvar composition, tuned to 189 Hz (p:7%), outdoor installation and IP44 protection degree. Details of the step with fuse protection, vacuum contactor, filtering reactor and three-phase capacitor.

**Paper industry**

Automatic multi-step capacitor bank with detuned filter, model **CMSR**, 6750 kvar at 22 kV, 50 Hz, 750+4x1500 kvar composition, tuned to 189 Hz (p:7%), outdoor installation and IP54 protection degree. Voltage presence indicator, ON/OFF step, manual or automatic step selection, reactive energy regulator with three-phase measurement and overcurrent, short-circuit and step offset protection relays.

**Road infrastructures**

Automatic multi-step capacitor banks with detuned filter, model **CMAR**, 100 kvar at 3.3 kV, 50 Hz, 1x100 kvar composition, indoor installation and IP23 protection degree, tuned to 189 Hz. Details of the structure adapted to the space available in the tunnel and corporate colour requested by the client.

## Additional components of MV capacitor banks

**Pressure switch**

Disconnects the step/capacitor bank with the pressure generated after a serious fault inside a capacitor, in order to prevent greater damage. It enables the power circuit to be disconnected and signals the fault when the pressure reaches the maximum value.

**Voltage presence indicator**

A unit that lights up permanently when the power circuit is powered to provide greater safety during operations carried out on the unit.

**Smoke detector**

Smoke detectors are devices that warn about the possibility of internal combustion in the capacitor bank and that send a signal to activate an alarm (in the unit or at the discretion of the user), disconnecting the battery if necessary.

**Electric circuit with opening delay for doors**

For units that are ordered with doors in the power modules, Circutor offers the possibility of including a solenoid electrical interlock system in order to prevent access to the capacitor bank's interior if the necessary time has not elapsed.

**SVacuum off-load and/or earthing switch**

The cut-off and/or earthing switch enables the unit to be visually disconnected and isolated at the capacitor bank input.

**Ventilation**

In the case of capacitor banks installed in environmental conditions where natural convention cooling is insufficient, an auxiliary thermostat-controlled forced air system is essential for evacuating the internal heat of the capacitor bank.

**Anti-condensation heating resistors**

These are used to avoid condensation due to temperature gradients during the day, under saline environmental conditions, high relative humidity and low temperatures. Heating resistors controlled by thermostat and/or hygrometer.
